Make checks payable to: Janus

* Shipping is by first class mail. See next page for international shipping charges.

Write for information on volume discounts for academic use.

Ordering Instructions

Ordering The Personal Astrolabe is very easy. Simply fill out the order form and mail it, with payment, to **Janus** at the address on the form. The order form may be sent electronically, but your astrolabes will not be shipped until payment is received. **Janus** does not accept credit cards. We have shipped over 6,000 astrolabes to 57 countries, so far. Send us a note for international payment options.

The costs shown on the order form are for the US only. International postage rates were recently increased. For air postage to Canada, add \$3 US. For Mexico, add \$6.00 US. For shipping by air post to Europe, Australia and Africa add \$9.00 US for either one or two astrolabes. Send a note for current international postage cost to other locations. The shipping weight is 1 lb. 2 oz. Shipping charges are for our cost.

Please write clearly and be complete. We often have to write to clarify information that we cannot read. This is why we ask for your e-mail address. Be particularly careful to make sure the e-mail address is written clearly. We cannot contact you if we can't read the e-mail address and we can't even write if we can't read the shipping address. We never use your e-mail address for any other purpose.

It is generally better to have your Personal Astrolabe shipped to your home or office instead of a post office box if possible. We stamp the package, "Do Not Bend" eight times on both sides of the shipping envelope, but we have had cases where considerable effort was exerted to bend the package to fit into a post office box. Return your astrolabe package to Janus for replacement if this occurs.

The name, city and state will be printed on your astrolabe(s) exactly as they appear on the order form. The names can be all caps or mixed case. We cannot use small caps in the names. Make the names all caps if that is what you want, or use lower case letters (preferred) in the names. You can specify different names and dates for the Modern and Classic Edition instruments in a Combination Package order, but both instruments must be for the same location. The maximum length of the name to be printed on the front of your astrolabe is 30 characters and spaces.

Be careful when specifying your latitude and longitude. We get many orders where the latitude and longitude were copied from GPS receivers. Some GPS receivers display latitude/longitude in decimal degrees and degrees and minutes are used on the astrolabe. We are happy to make the conversion if you note that you are using decimal degrees. There are many tools available to find your latitude and longitude. The most convenient are web based map sites or computer mapping tools such as Street Atlas USA or Google Earth.

The "Houses of Heaven" are optional on the Classic Edition for several reasons. Some teachers and students do not want such astrological material on an educational instrument. Also, for students of the history of astronomy, several methods of defining astrological houses were used in the past that were quite different from the convention used on astrolabes. For example, Chaucer devotes considerable space to determining the astrological houses in his 14th century treatise, but in a different system. You would not want the astrolabe houses on an instrument that will be used in conjunction with Chaucer's treatise.

There are only a few places on The Personal Astrolabe instrument that may benefit from translation into your national language. We can produce your astrolabes with the month and zodiac names and other annotation in English, French, German, Latin (Classic Edition only), Italian, Spanish, Swedish and Dutch so far. We can easily add any Latin based character set languages. All we need is for you to supply the translations (including all accents) of the month names, the signs of the zodiac, the words for North, South, East and West and "Longitude", "Longitude Correction" and the abbreviation for minutes (min.) and seconds (sec.). Contact **Janus** if you have any questions. There is no charge for customizing your astrolabes to a new language. The book is available only in English.
